

Diskeeper[®]9

Technical Specifications

OVERVIEW

NEW Diskeeper 9 is packed with new features and new technologies that boost computer speed and reliability while minimizing system resource use. Diskeeper 9 runs unobtrusively in the background, maintaining like-new system performance with no user intervention required—just “Set It and Forget It!”[®] While the background operation of Diskeeper 9 is practically undetectable, the performance benefits are easy to see: Diskeeper makes fragmentation-related slowdowns and crashes a thing of the past.

Its high-speed defragmentation engine and Microsoft-recommended boot-time defragmentation of critical system files (Professional and Server editions) have made Diskeeper the standard in automatic defragmentation for Windows. Complementing the boot-time mode is the new FragShield™ feature, which dynamically reduces system-file fragmentation.

“Set It and Forget It” scheduling now allows up to two schedules per volume; scheduling options include the exclusive SmartScheduling™ mode, which schedules defragmentation as needed, and screen saver mode. New I/O Smart™ ensures undetectable background defragmentation by giving other processes priority access to the disk. There is new functionality available from the system tray icon, and Diskeeper Administrator Edition boasts Active Directory group policy support, improved reporting, and multiple console capability.

NEW FEATURES IN DISKEEPER 9

White bullets (○) denote features available exclusively in Diskeeper Professional and Server editions

- FragShield prevents fragmentation of critical system files, maintaining system speed and reliability.
- I/O Smart intelligently monitors drive access during defragmentation to ensure top speed.
- “Set It and Forget It” scheduling now allows up to two schedules per drive, allowing customized defragmentation based around your system usage patterns.
- File performance defragmentation mode gives an instant performance boost by defragmenting the files that are causing the biggest slowdowns.
- Performance Map gives a quick “at-a-glance” indication of each volume’s condition.
- Users with administrative privileges can open the Diskeeper user interface via the system tray icon; users without administrative privileges can right-click the icon to “bump” a defrag pass to a later time.
- New Diskeeper Administrator Edition functions include support for management via Active Directory group policies; expanded reporting options; automatic reporting from client machines; and the ability to run from multiple consoles.

Diskeeper 9 Technical Specifications Continued

DISKEEPER 9 EDITIONS

Diskeeper 9 offers several editions customized to meet the defragmentation needs of different types of systems.

Diskeeper 9 Home Edition is designed for home users who want maximum performance and stability with straightforward “Set It and Forget It” functionality. Defragments volumes up to 512GB.

Diskeeper 9 Professional Edition provides enhanced functionality for advanced users and network environments. Features include boot-time mode, FragShield, file performance defragmentation mode, and power management feature for laptops. Can be managed by Diskeeper Administrator Edition. Simultaneously defragments up to 4 volumes of 512GB each.

Diskeeper 9 Server Standard Edition maximizes server speed and availability while eliminating the need to take the server down for defragmentation. Multi-pass engine and I/O Smart technology allow thorough defragmentation without slowing down server response times. Can be managed by Diskeeper Administrator Edition. Simultaneously defragments up to 8 volumes of up to 768 GB each.

Diskeeper 9 Server Enterprise Edition features the exclusive Terabyte Volume Engine™, specially designed to defragment ultra-large disk volumes on high-capacity and mission-critical servers. Can be managed by Diskeeper Administrator Edition. Simultaneously defragments up to 16 volumes of 4 TB each.

Diskeeper 9 Administrator Edition is a centralized management utility that enables you to remotely install, schedule and manage Diskeeper across your entire network—without leaving your desk. Diskeeper Administrator supports management via Active Directory group policies, and features advanced reporting, remote console functionality, automatic alerts via e-mail of potential disk problems, and support for management from multiple consoles.
